

Care & Maintenance for Stainless Steel Sinks

- Clean stainless steel at least once a week.
- Always apply stainless steel cleaner/polish with a nonabrasive cloth or sponge, working along the grain, NOT across.
- Do not use steel wool, wire brushes or abrasive sponge pads. Use only non-scratch cleaning pads.
- Cleaners containing chloride (bleach) are not recommended. If used, rinse the surface immediately to prevent corrosion.
- Most stainless-steel products will scratch from everyday use. However, these scratches will blend over time to create a unique finish.
- Do not store open containers of cleaners or chemicals such as acids, bleach, sodium chloride, dye, toilet bowl cleaner, drain cleaner, or hard water stain removal products under your sink.
- Cleaning instructions listed pertain only to their corresponding material and are not intended for faucet cleaning. Please refer to manufacturer's instructions.
- Success with cleaners and procedures is dependent upon factors such as the hardness and temperature of the water, using exact measurements of ingredients, changes in cleaning formulas and the condition of the product being cleaned. Since there are variations within these factors, Cosmos cannot guarantee the effectiveness of the formulas mentioned.

Care Tip

Allowing water to evaporate on metal will form water deposits. To avoid this and keep your product looking spotless, it is important to wipe the sink clean with a soft cloth after each use.

Products to Consider

- Bar Keeper's Friend Soft Cleanser
- Stainless steel cleaner & polish
- Steel Meister
- Formula 409 Antibacterial All Purpose
- Windex Original
- Fantastik Antibacterial Heavy Duty

For rust removal:

- Bar Keeper's Friend MORE Spray & Foam Cleaner
